

Drew Byford

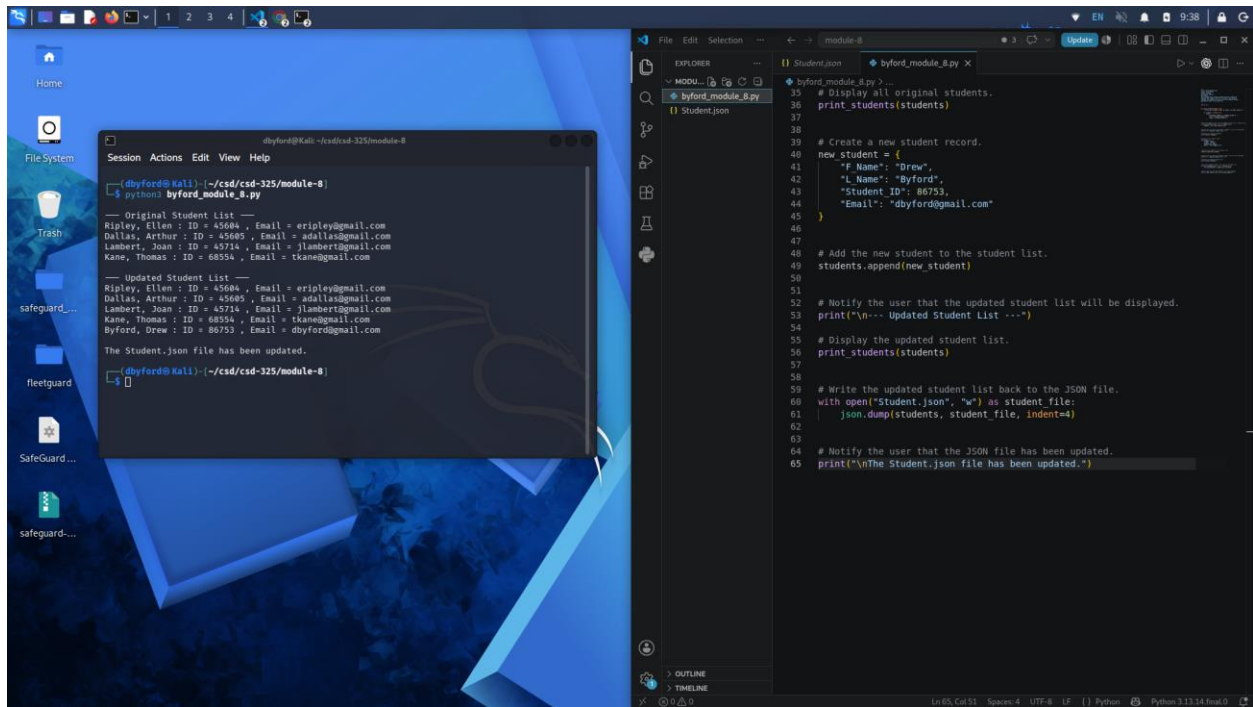

CSD-325

Module 8 Assignment

Flowchart

Program Execution

The screenshot shows a Kali Linux desktop environment. On the left, there is a sidebar with icons for Home, File System, Trash, safeguard..., fleetguard, SafeGuard..., and safeguard.... In the center, a terminal window titled 'dbyford@kali: ~/csd/325/module-8' displays the output of a Python script. The output shows the original student list, the updated student list (which includes a new student, Drew), and a confirmation message that the Student.json file has been updated. On the right, a code editor window titled 'module-8' shows the Python code for 'byford_module_8.py'. The code includes comments and logic to display the original student list, create a new student record, add it to the list, and update the JSON file.

```
dbyford@kali: ~/csd/325/module-8
python3 byford_module_8.py

— Original Student List —
Ripley, Ellen : ID = 45604 , Email = eripley@gmail.com
Dallas, Arthur : ID = 45605 , Email = adallas@gmail.com
Lambert, Joan : ID = 45714 , Email = jlambert@gmail.com
Kane, Thomas : ID = 68554 , Email = tkane@gmail.com

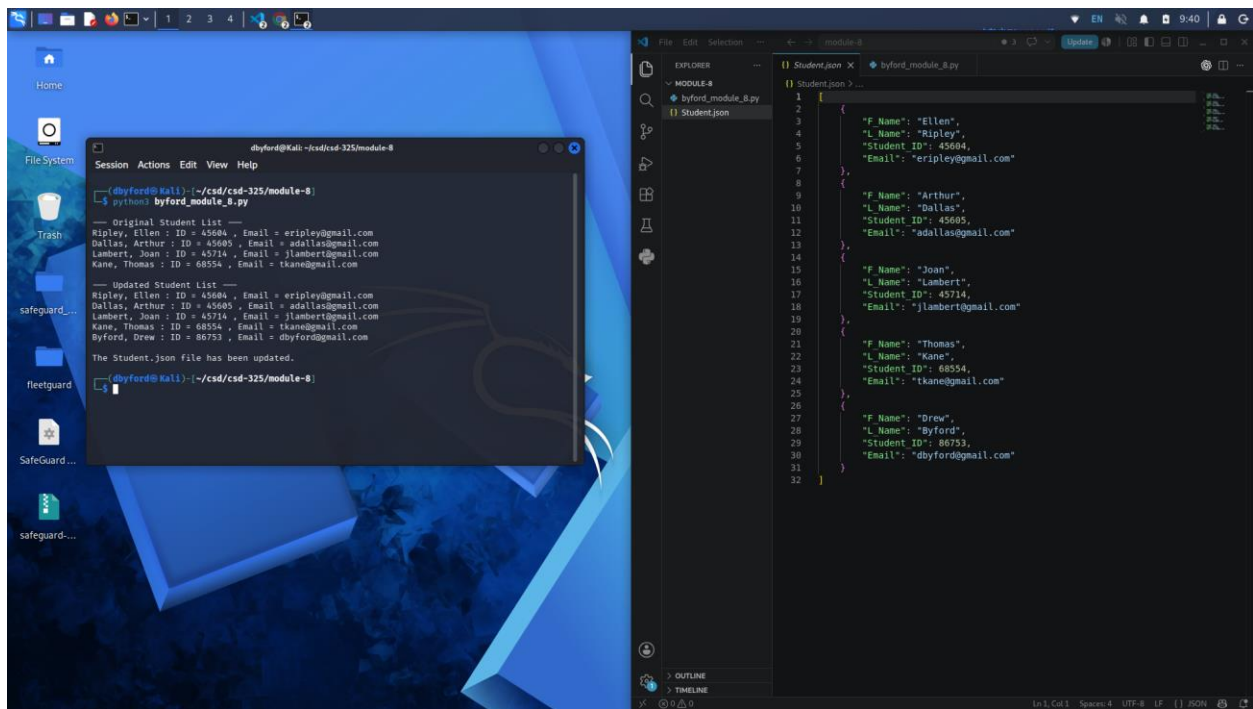

— Updated Student List —
Ripley, Ellen : ID = 45604 , Email = eripley@gmail.com
Dallas, Arthur : ID = 45605 , Email = adallas@gmail.com
Lambert, Joan : ID = 45714 , Email = jlambert@gmail.com
Kane, Thomas : ID = 68554 , Email = tkane@gmail.com
Byford, Drew : ID = 86753 , Email = dbyford@gmail.com

The Student.json file has been updated.

dbyford@kali: ~/csd/325/module-8
```

```
byford_module_8.py
35 # Display all original students.
36 print_students(students)
37
38
39 # Create a new student record.
40 new_student = {
41     "F Name": "Drew",
42     "L Name": "Byford",
43     "Student ID": 86753,
44     "Email": "dbyford@gmail.com"
45 }
46
47
48 # Add the new student to the student list.
49 students.append(new_student)
50
51
52 # Notify the user that the updated student list will be displayed.
53 print("\n--- Updated Student List ---")
54
55 # Display the updated student list.
56 print_students(students)
57
58
59 # Write the updated student list back to the JSON file.
60 with open("Student.json", "w") as student_file:
61     json.dump(students, student_file, indent=4)
62
63
64 # Notify the user that the JSON file has been updated.
65 print("\nThe Student.json file has been updated.")
```
